Technical descriptions

MELAMINE TOPS: made from 18-mm thick chipboard panels and covered with a decorative paper impregnated with melamine resins (density 650Kg/m³ E1, CARB PH 2/TSCA Title VI. Panels with low formaldehyde emission, less than 50% of class E, according to UNI EN standards. Fire reaction class Ds2, d0 – Dfl-S1) and with a 2 mm-thick rounded solid ABS edge (38mm tops=1mm thick abs edge). The tops are hooked onto the reinforced nylon clips positioned along the beams of the structure using self-threading screws which are connected to the steel inserts under the top. In the “meeting table” versions, tops have a “brush” profile applied to the internal side in order to allow for cable outlets directly onto the top. Optional accessories can be inserted into the previously perforated wooden tops to allow for the passage of cables such as a simple ABS cover with a diameter of 80 mm or a plug box with a cover and cable gland fixture.

GLASS TOPS: made from 12 mm-thick toughened glass with a shiny rounded edge; the surface below is sanded or can be lacquered in various colours. The glass tops are fixed to the structure using suction cups.

DOUBLE-SPAN STRUCTURE: made from 2 mm-thick drawn steel tubes aluminium-coloured, 70 x 30 mm, to which 2 square shaped legs, 100 x 100 mm, are connected, and made from melamine wood obtained with folding technology in colours matching the tops. The intermediate support legs at the centre of the meeting tables are positioned further back to allow use of the entire top surface. All the legs have 10 mm height regulating feet.

PANELLED STRUCTURE: further to the square support leg version, it is also available a panel leg which is 100 mm thick. The leg is made from the same technology used for the square legs that are fixed to the steel beam to create a single, solid support element. All the legs have 10 mm height regulating feet.

BEAMS: the support legs are connected using a pair of telescopic beams which are made from 40 x 40 mm square drawn steel tubes. At the ends of the beams there are coupling elements for the support legs in aluminium-coloured ABS with a chrome-colour finishing on the external part; extension of the telescopic beams varies from 800 to 1000mm-from 1200 to 1800mm-from 2000 to 2400 mm. The beams also allow for the application, through the use of reinforced nylon elements, of tilting or modular baskets, made from epoxy powder coated steel wire with a 6 mm perimeter section and an internal mesh of 3.5 mm, required to transfer and hold electrical, telephone and computer cables. Beams of the extension tops with frame or of the lateral “bridge” solutions can also be fixed to the beams of the workstation using a suitable hooking system which is made from ABS moulded elements. The beams are finished with black epoxy paint

MELAMINE MODESTY PANELS: they are made from 18-mm thick melamine panels (density 650Kg/m³ E1, CARB PH 2/TSCA Title VI. Panels with low formaldehyde emission, less than 50% of class E, according to UNI EN standards. Fire reaction class Ds2, d0 – Dfl-S1) edged on 4 sides with melamine paper, with a 1 mm-thick solid ABS along the horizontal edging and a 2 mm radius. They are fitted to the telescopic beams of the structure by a pair of fixing brackets which are mounted along the vertical edges of the modesty panel itself.

PEDESTALS AND SERVICE MODULES: structure made of 18 mm thick chipboard (density 650Kg/m³ E1, CARB PH 2/TSCA Title VI. Panels with low formaldehyde emission, less than 50% of class E, according to UNI EN standards. Fire reaction class Ds2, d0 – Dfl-S1). The fronts are 18 mm thick, the backs are structural and made of 12 mm thick chipboard (weight 620 Kg per m³, class E1 with low formaldehyde emission, class 2 fire reaction according to ISO standards), top and side panels are 12 mm thick. The doors are fitted with anticorrosion treated hinges with an opening of 105° and soft slow closure, the locks are a cylindrical Yale type with articulated key grip. Top, fronts, doors, backs and side panels are edged along the perimeter with 1 mm ABS and 2 mm radius. The handles are ABS colour aluminium. The drawers are applied with guides or with simple sliding extraction on self-lubricating wheels with soft closure or telescopic extraction metal guides with integrated soft closure for filing cabinets, equipped with anticorrosion treated ball carriage, made of folded sheet metal with an 8/10 thickness and painted with epoxy powders. A stationary drawer is always supplied, equipped with simple sliding extraction guides on small self-lubricating wheels. Appropriate drilling along the side edges allows the installation of optional accessories, such as horizontal separators file holder separators. 33 and 39 cm files can be hung from the file hanger frame. The drawers are equipped with 5 cm diameter swivel wheels, 2 of which with a brake; the filing cabinets have the 5th wheel with a function to prevent overturning; the service modules are equipped with Ø52 x h.18 mm feet with adjustable foot inside the furniture. The furniture can also be positioned on 5 cm diameter swivel wheels, 2 of which with a brake. The filing cabinets have the 5th wheel with a function to prevent overturning. Some compositions are equipped with a technical module with CPU port and cable passage designed to hang under the desk to make maximum use of less accessible areas.

STORAGE UNITS: body made of 18 mm thick chipboard (density 650Kg/m³ E1, CARB PH 2/TSCA Title VI. Panels with low formaldehyde emission, less than 50% of class E, according to UNI EN standards. Fire reaction class Ds2, d0 – Dfl-S1) edged with melamine paper on 4 sides. Top and side panels are in 12 mm thick and the edge along the perimeter sides is 1 mm thick – 2 mm radius rounded ABS. Doors made of 18 mm melamine, fitted with anticorrosion treated hinges with an opening of 105°, the locks are a cylindrical Yale type with articulated key grip. The handles are made of ABS with aluminium finish. Glass doors made of 4 mm tempered etched or coloured glass, equipped with extruded aluminium perimetrical frame or painted white or black; lock and hinges at 170° cannot be mounted on these doors. The furniture is positioned on an 18 mm thick melamine base, supported by feet made of chrome-coloured 40x40xh.195mm square ABS.

FG: La finitura ferro grezzo "FG" risalta la natura "industriale" del metallo grazie ad un trattamento protettivo trasparente. Differenze di tonalità, abrasioni, striature e saldature sono tipici della materia prima stessa e delle successive lavorazioni e sono tra gli elementi caratterizzanti del prodotto e per questo non contestabili.
FG: The raw steel finish "FG" emphasizes the "industrial" nature of the metal thanks to a transparent protective treatment. Differences in shades, abrasions, stripes and welds are typical of the raw material and subsequent processes, and are among the characteristic elements of the product, therefore not claimable.
FG: La finition en métal brut "FG" démarque la nature "industrielle" du Métal grâce à un traitement avec une protection transparent. Les différences dans les nuances, les abrasions et les soudures sont typiques de la matière première et des ultérieures process de production et font partie des éléments caractéristiques du produit et donc non contestables.
FG: Das rohes Metall-Finish "FG" sticht besonders hervor der "Industriellen" Natur der Metall durch einer Transparenten Schutz Behandlung. Unterschiede in Farbton, Abrieb, Streifen und Schweissungen sind typisch für den Rohstoff und die nachfolgenden Prozesse und gehören zu den charakteristischen Elementen des Produkts und daher sind nicht anfechtbar.
FG: El acabado de hierro bruto "FG" destaca la naturaleza "industrial" del Metal gracias a un tratamiento protector transparente. Las diferencias en los tonos, abrasiones, rayas y soldaduras son típicas de la materia prima y los procesos posteriores y se encuentran entre los elementos característicos del producto y, por lo tanto, es indiscutible.
